1. Introduction

The WOOSH Speedtest results tool will allow Service Provider's to interrogate the speedtester database.

NOTE:The end user must use Internet explorer when using the speedtester, any other browser cannot be relied upon to display the correct results.

2. Overview

The Speedtest results tool is a stand alone tool displayed on the WOOSH toolbar. The One Shot Check can also interrogate the same database but the search period is predefined.

3. Speedtest Results tool

This tool will allow Service Provider's to request data held in the speedtest database using a search period of up to 30 days.

3.1 Input Screen

The input screen must be completed by entering the CBUK number and selecting the search period from the drop down menu from 1 to 30 days. After these details have been input, click "submit query".

Broadband Speed Test Database Check

Enter the service identifier		
<input type="text"/>		
Select the number of days to look back		
1		
Submit Query	ResetButton	Help

3.2 Results Screen

After a short period of time the results screen will be displayed.

Broadband Speed Test Database Check Results

BBIP10612954	CBUK10614562	02392375756	Look Back 20 days
--------------	--------------	-------------	-------------------

Records ordered by Date and Time - Oldest at bottom

Start Time	Throughput (kb/s)	IP Address	Browser	Operating System
17/08/04 14:55:11	400	81.152.227.92	MS IE 6.0	Windows XP
05/08/04 08:45:32	400	81.155.69.77	MS IE 6.0	Windows XP

New Query Help

Information displayed includes the BBIP number, CBUK number, Directory number and the search (lookback) period.

Other information displayed in table format includes:-

Start time – this is the time and date the speedtest was run by the EU.

Throughput – This is the result in Kb/sec.

IP address – This shows the IP address.

Browser – This displays the EU browser.

Operating system – shows the operating system. Eg Windows XP

4. Help Screens

Help screens are available to aid operation of the Speedtest results tool.
