## Attachment 1: Closure list of issues for 2011 AIT Contract Review

| Issue | CP(s)*                            | Issue  | para No.   | Summary   | Closure statement   |
|-------|-----------------------------------|--|--|---|---|
| No.   |                                   | Name   |  | of Issue  |   |
| 1     | Three<br>and<br>also<br>C&W<br>BT | Administrative<br>burden of<br>faxes for<br>submitting AIT<br>claims | Para 28 main<br>body<br>Annex E,<br>paras 2.5(a),<br>4.1, 5.3 and<br>6.3       | Fax is inefficient and an unnecessary<br>administrative burden. Certainty of delivery is now<br>possible to ensure by email rather than fax. We<br>propose that email ought to be adopted for the<br>submission of AIT claims, as an alternative or<br>substitute to the current fax process. Despite the<br>fact that this issue is already being investigated via<br>the 2010 SIA General Contract Review, we suggest<br>that, for completeness it is included in this review<br>too, given the impact it has on current AIT process. | Now closed as a Contract Review<br>issue following the establishment of<br>the industry trial.<br>An invitation to participate in an e-<br>mail trial was sent to each CP on 2<br>August 2011, following an industry<br>briefing on 27 July.<br>The trial is now being pursued<br>separately. |
| 2     | Three                             | Debit Notes  | Clause 6.6 (a)<br>iv of the Annex<br>E of the AIT<br>Supplemental<br>Agreement | <ol> <li>Three proposes that:</li> <li>The CPs agree a form of debit note which will be accepted by all parties for the purposes of Annex E; and</li> <li>There shall be no obligation on the ONO to contact TNO before issuing a debit note over and above confirming to the TO that it had not received a Rejection Notice by the 34th AIT calendar day. Should the TO not be satisfied, it shall confirm from its own records whether a Rejection Notice was sent to it by TNO in copy.</li> </ol>                                   | Guidance for the use of Debit Notes<br>was developed and added to the<br>issued AIT Operations Guide  |
| 3     | C&W                               | Third-party<br>scenario  | Annex E para<br>5.2  | Amend paragraph 5.2 of Annex to provide for extended timescales where the retention results from 3 <sup>rd</sup> party notification.  | It was agreed that it was not<br>practicable for TNOs and their<br>service providers to cope with further<br>grounds for extending the serving<br>date.   |

| 4 | C&W    | Overseas<br>scenarios | Appendix E5,<br>point 15 | We would like to explore the opportunity to expand<br>the scope of AIT to overseas scenarios - other than<br>just calls to UK PRS which have originated<br>overseas. | It was agreed that it was not<br>practicable to extend the domestic<br>AIT scheme to take in outgoing IDD.   |
|---|--------|-----------------------|--------------------------|--|--|
| 5 | Jersey | Scope of AIT          | Annex E                  | Extend scope of AIT to include Calls rerouted<br>overseas e.g. PBX hacked calls to a UK PRS<br>number rerouted to international premium rate<br>services             | It was agreed that PBX hacking and<br>switch security is essentially a matter<br>for the originating network. It would<br>not be reasonable to add PBX<br>hacking to the list of AIT indicators<br>so that of itself it was sufficient case<br>for "reasonable suspicion" and<br>therefore for retention. Although PBX<br>hacking would alert the AIT<br>specialist, as with the generality of<br>traffic, it would only become<br>appropriate for AIT retention if its fits<br>the AIT criteria.                                    |
| 6 | BT     | Scope of AIT          | Annex E para<br>1.2      | "For the avoidance of doubt" reference to National<br>Telephone Numbering Plan   | Agreed to add confirming text to paragraph 1.2   |
| 7 | BT     | Rejection<br>Notices  | Annex E                  | Consider how to deal with procedural issues e.g.<br>wrongly quoted prices, wrong number ranges,<br>failure to deliver AIT Call Data                                  | BT's recommendations have been<br>added to the AIT Operations Guide;<br>the attention of all CPs is drawn to<br>paragraph 5.2.3. It would seem 'best<br>practice' for TNOs to wait for receipt<br>of the relevant CDR information from<br>the ONO before issuing an A2<br>Rejection Notice, unless it is clear<br>the A1 Retention Notice information<br>is so factually incorrect as to make it<br>impracticable to investigate the<br>alleged incidence (e.g. wrong<br>number ranges). Upon receipt of<br>CDR data (which is a key |

|   |    |            |         |  | requirement) any Rejection Notice<br>issued by TNO should be clear as to<br>why they believe the submitted CDR<br>does not support AIT and as<br>appropriate provide <b>additional</b><br><b>evidence</b> (i.e. own data, supporting<br>documentary information as to<br>services on offer) to refute a claim of<br>AIT. At all times BT should be copied<br>in. |
|---|----|------------|---------|--|--|
| 8 | BT | PPP CoP 12 | Annex E | Review any possible impact of PhonepayPlus Code of Practice edition 12 | Reviewed and agreed that no direct<br>impact for interconnect – matter for<br>terminating operator and<br>downstream service providers.  |
