*A number of On Net Data Centres are now at capacity for Etherflows above 1Gb until the backhaul is upgraded from 10Gb to 100Gb. Those DC's which are now at capacity (highlighted in red, column I), can only take new Etherflows up to 1Gb. Whereby there are multiple 7750's/ switches (i.e. EES1 & EES2) please check the alternative switch in that same DC as typically we have upgraded one of the switches in the DC to 100Gb backhaul. There are no limits on high bandwidth Etherflow volumes for those DC's which can support up to 10Gb Etherflows (i.e. the backhaul has been upgraded to 100Gb).
