

# Time for a spring clean?

**Our Managed Decommissioning service helps dispose of and recycle your old IT equipment, and wipe your old data.**

Not just because you have a corporate social responsibility but without proper removal of the data, you could be in breach of GDPR regulations. Which could have serious consequences.

With Managed Decommissioning, the headache of worrying what to do with old equipment is taken away. We'll perform an audit if your equipment needs to be recycled or disposed of.

You'll also be saving money too. Costs for storing unwanted assets and the fact they'll lose value over time. So it's in your best interest to remove unwanted assets as soon as possible to see the best return and improvements on your cash flow.

## Did you know?

- It's up to you to ensure GDPR compliance (but we can do that for you).
- Our service is fully compliant meaning you'll be fully GDPR and WEEE compliant.
- You can improve your brand reputation by cleaning out and going green.
- With Managed Decommissioning, you'll be able to achieve full WEEE compliance, lower your environmental risks and support the circular IT economy.
- And as we're fully compliant with all GDPR regulations, we'll ensure there's no customer data left on any device so you won't suffer from any fines.

## The steps we take to manage decommissioning

**Auditing.** If you already know which assets you need to get rid of, we have a template for you to fill in. We'll use this to provide a quote for the asset values, along with the price for decommissioning. Or if you prefer, we can perform a full audit where our experts will come in and do all the work for you.

**Project management.** Delivery plans and managing all parts such as auditing, recovery, data wipe and invoicing will be a breeze as our project managers will do it all. And you'll get the certifications to show that your materials have been recycled and all data has been stripped.

**Cashback.** You'll get a percentage of the value we receive from scrapping or selling your redundant assets. You can either get cashback as soon as an asset's been recovered from your site, or as each site is closed down. We work around you to make sure your old equipment is removed accordingly under all appropriate guidelines.

**Recovery and decommissioning.** We have multiple options for removing assets. We can physically come and decommission and disconnect them. Or if you've done the work yourself, we can offer a collection only service. We can also data sanitise onsite – just let us know what works best for you.

**Data destruction.** We remove all the data from your equipment and provide you with a data destruction certificate for every asset. Our project managers can collate them into one complete pack so you'll have it all in one place.

**Recycling and clearance.** We'll recycle as much of the materials as we can and once the project's complete, we'll give you the percentage of value from. We're transparent about where your items have gone, to ensure you can demonstrate how eco-friendly your business is.

## Why is Managed Decommissioning good for you?

- Take away the risk. We own the data destruction and adhere to GDPR regulations so you can protect your reputation.
- Become more eco-friendly. By supporting the Corporate and Social Responsibility (CSR) agenda, you can promote the environmentally friendly aspect of your business.
- Cut costs. Our cashback scheme helps offset the cost impacted due to the value of your asset reducing over time.
- Help you get on with business. With our project managers there to help, we'll get it done quickly so business doesn't have to be put on pause.
